### Notes

Each seat includes, at no additional cost, two 50x50cm cushions in outdoor fiber, with an open-cell polyurethane foam insert, covered in draining fabric.

Especially after prolonged rainy or humidity periods, it is suggested to rotate the elements and/or to temporarily lift the seat/back/armrest cushions to allow a complete drying and to avoid accumulation of dirt and moisture, causing the formation of mold.

It is recommended to use a "Protective Cover", to be put over a completely dry product, to improve its longevity; please note that the protective cover is made of a water vapor repellent fabric, perfect to prevent and protect from the formation of mold, easily washable with water and soap. It is always recommended to completely dry the cover. Do not keep the fabric folded for a long time when it is wet. For further information about the dedicated maintenance, please refer to the technical sheet available in the "Materials" section on our website. Lastly, we recommend placing the product on terraces or verandas to guarantee its durability over the years.

According to the product shape, some coverings cannot be used; please refer to the adaptability sheet in the "Materials" section of the website.
